UCSB’s data site provides geographic search by extent. “Where in the world is campus research happening?”

Apps configure research dissertations by topic spaces. “What topics best describe what campus research is about?”

Enabling Spatial Discovery of University Scholarship

- The University of California, Santa Barbara, in partnership with the UCSB Library and Esri, has launched an instance of ArcGIS Open Data to showcase campus research.

- Datasets and publications across departments, such as Marine Biology, Archaeology, and Political Science, are geographically referenced, discoverable, and linked.
